

AI-GOVERNED VIRTUAL DATA ROOM

Built for high-stakes transactions, due diligence, and document intelligence.

VDRPros is an AI-driven virtual data room for secure corporate transactions, M&A, fundraising, litigation support, and high-volume document review. It performs local first-pass analysis, OCR, risk extraction, evidentiary indexing, and drafted diligence reporting inside the user's browser, with tamper-evident security and full auditability at every step.

- 🕒 **Audit per second, not per page.** Automated diligence that reads, normalizes, seals, indexes, and drafts reports at machine speed, replacing legacy per-page billing.
- 🔒 **Local, governed first-pass review.** Files are read, OCR'd, de-duplicated, and sealed in the browser. Nothing leaves the user's environment until they approve. Every file receives a SHA-256 seal.
- 📄 **Agentic diligence with exact citations.** Red flags quote the exact passage, file, page, and character offset. Anything uncertain is quarantined for human triage, never guessed.

The VDR Auditor console on a live corpus: every file hash-sealed at intake, classified into evidentiary categories, with cited red flags and data-dumping patterns surfaced for review.

KEY FEATURES

Four capabilities, one governed pipeline

AI-driven document intelligence

- ◆ Extracts, OCRs, de-duplicates, and structures documents
- ◆ Identifies structural defects, gaps, and inconsistencies
- ◆ Builds an evidentiary index with confidence scores
- ◆ Drafts diligence reports with cited passages

Tamper-evident security

- ◆ SHA-256 sealing on every file at intake
- ◆ Re-verification available at any time
- ◆ Full chain-of-custody receipts for every step

Jurisdiction-aware compliance

Compliance references are matched to the workspace, enabling jurisdiction-specific diligence and regulatory alignment across every category, rule, and report section.

Zero-trust, AI-governed execution (IGL)

IGL, Identity Governed Logic, binds every AI action to four controls, making all reasoning auditable, reproducible, and governed:

Identity

Declared agent identity

Boundary

Allowed and denied operations

Intent

Declared purpose of the action

Trace

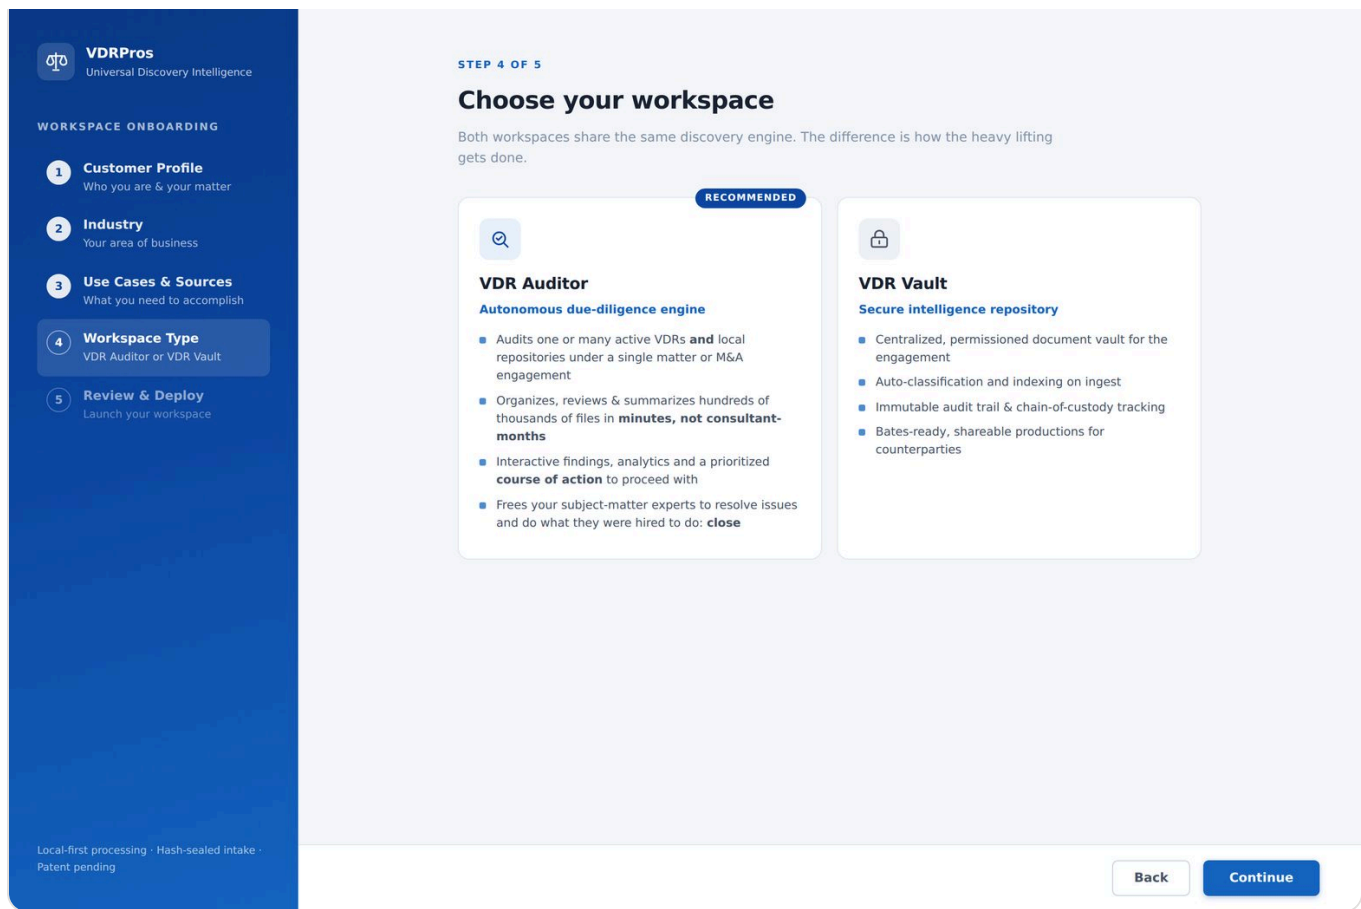

Append-only, signed reasoning log

THE PRODUCT IN PRACTICE

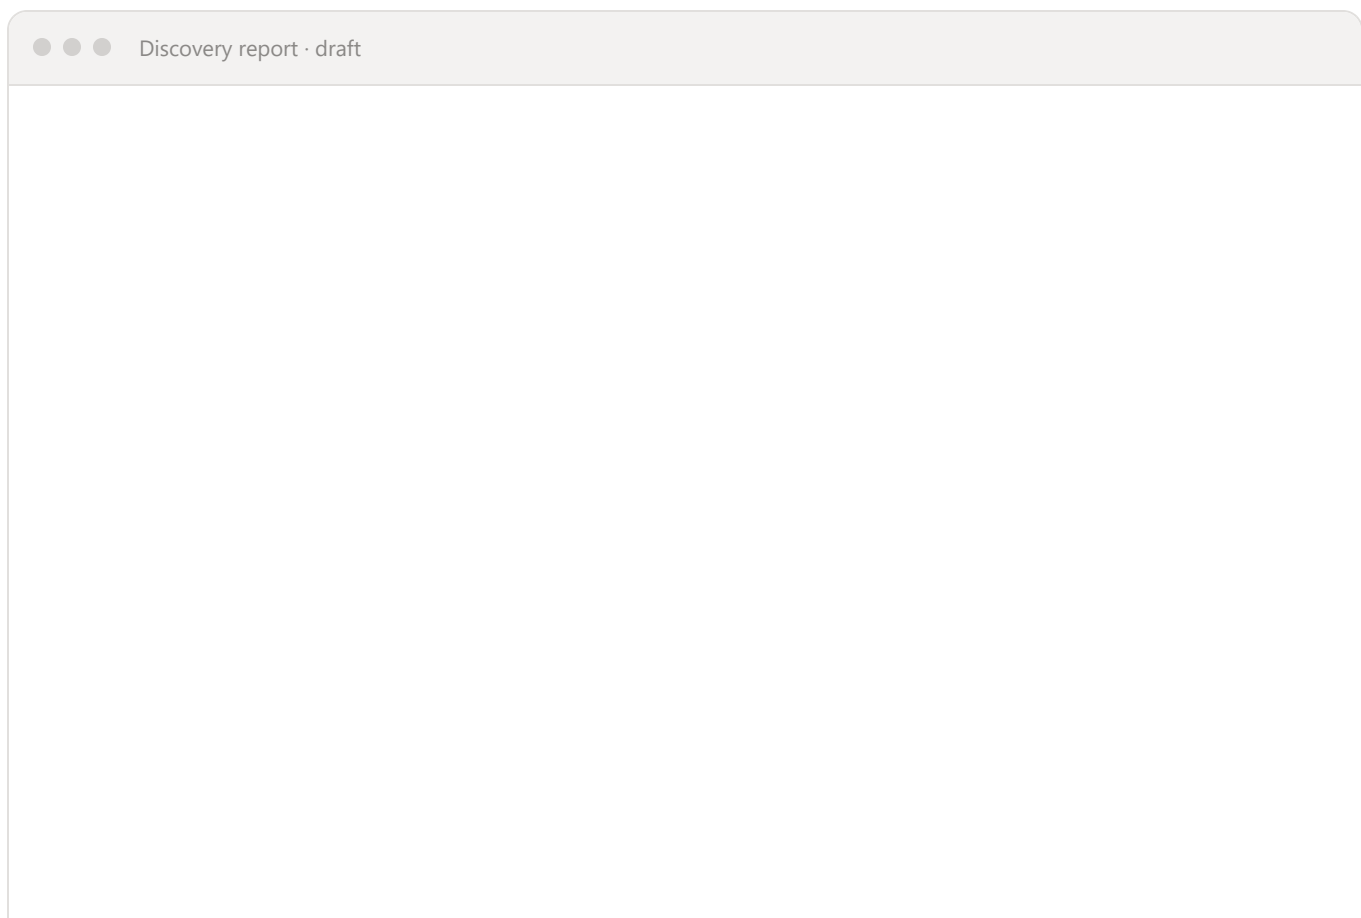

From guided provisioning to a court-ready report

A five-step onboarding stands up either workspace type, VDR Auditor or VDR Vault, on the same discovery engine. Intake seals every file on arrival; the output is a drafted discovery report with exhibits, hashes, and findings.

● ● ● Workspace onboarding · step 4 of 5

Provisioning: the workspace picker routes an engagement to the Auditor (autonomous due-diligence engine) or the Vault (secure intelligence repository).

VDRPROS EXECUTIVE DILIGENCE REPORT
 Generated: 8/14/2026, 11:32:32 PM
 Matter: Transaction Diligence
 Prepared for: SMEPro Technologies (Christopher Miguez)

The drafted discovery report: exhibit numbering, per-file SHA-256 seals, findings counts, and an executive summary generated from the corpus itself.

USE CASES

One engine across the transaction lifecycle

M&A and corporate transactions

Automated red-flag extraction, change-of-control clause detection, and identification of missing signatures, undated amendments, and duplicate documents.

Fundraising and investor reporting

Evidence-backed diligence reports, integrity checks, and prioritized action lists that keep a raise investor-ready.

Litigation and eDiscovery

Evidentiary indexing with exact-passage citation, and quarantine of uncertain findings for human triage.

Regulatory and compliance

The VDR market is shifting toward AI-powered compliance, with automated classification, contract analysis, and smart redaction reducing review time by up to 40%.

Energy, infrastructure, and technical diligence

High-volume technical document review with risk extraction across permits, leases, and operational files.

Sealed intake, any source

Entire data rooms, folders, or files are accepted at intake, auto-extracted recursively, and hash-sealed on arrival before analysis begins.

MARKET CONTEXT

AI is now the backbone of dealmaking

The global VDR market is growing on the strength of M&A volume, regulatory pressure, and AI adoption. Automated classification, contract analysis, redaction, and bidder prediction are becoming the expected baseline, not the differentiator.

\$4.11B

Global VDR market, 2026

\$17.46B

Projected by 2034

40%

Review-time reduction from AI-assisted classification and redaction

100%

Of AI actions in VDRPros logged with identity, boundary, intent, and trace

WHY VDRPROS IS DIFFERENT

Four commitments most data rooms cannot make

01

Local first-pass review

Most VDRs upload documents to the cloud immediately. VDRPros performs the entire first pass locally, sealing files before any transmission.

02

Governed AI (IGL)

VDRPros uses Identity Governed Logic to enforce identity, boundaries, intent, and trace on every AI action, closing the governance gaps identified in current AI identity research.

03

Exact-passage evidence

Every red flag shows its work: the passage, the file, the page, and the offset. This is a requirement for legal defensibility, not a convenience.

04

Autonomous, explainable, repeatable

Agentic diligence runs on its own but remains fully explainable through signed reasoning traces. The same corpus produces the same findings every time.

SUMMARY

Beyond storage and access: governed intelligence, auditable reasoning, machine-speed diligence.

VDRPros is the next evolution of the virtual data room, built for organizations whose work demands more than a filing cabinet. It delivers local execution, tamper-evident sealing, and IGL-governed AI in a single browser-native platform.

✓ High-stakes document review

✓ Regulatory alignment

✓ Evidentiary integrity

✓ AI governance

✓ Zero-trust security

✓ Chain-of-custody receipts
